THE OIL INDUSTRY IN THE HUNGARIAN ECONOMY

382 that industrial demand for oil reached at least the wartime peak, and very probably exceeded it.

185 382 497 In transport the plan called for the restoration of prewar capacity with a few improvements added and imposed no insatiable demands on the oil industry. No dieselization of locomotives had been carried out before the war, and none was scheduled by the plan. In 1948 the Hungarian National Railroads used only 1,740 tons of oil, compared with 1,584,000 tons of coal and 33.24 million kilowatt-hours of electric energy.

398 In the final plan report it was mentioned that there were "fewer" passenger cars in 1949 than the 18,900 listed in 1938. The number of buses, however, increased 50 percent from 700 in 1938 to presumably 1,050 in 1949. According to similar calculations, there were 9,500 trucks in 1949 compared with 3,800 in 1938.

362 374 As no appreciable quantities of oil were used for the heating of private homes the 120,000 cottages built in rural areas during the plan period had no effect on oil consumption; and the total number of new apartments built in two and a half years in urban areas was only 5,200 compared with the prewar average of 10,000 annually.

464 [316] Employment in mining and manufacturing (excluding handicraft) rose from 330,000 in 1938 to 443,000 by the end of 1949 but was still below the 1943 level of 470,000. Of the 1949 figure mining accounted for about 75,000 as [489] compared with 49,000 in 1938. There were very marked [331] increases in the transportation and building industries, each employing about 120,000 persons.

241 Despite the impressive increase in industrial strength in the years 1938-1949, Hungary remained an essentially agrarian country. Agriculture remained by far the most important single industry, employing an estimated 1,960,000 persons, or 46.4 percent of the working population.

000 Operations in the oil fields had been little disturbed
